COMMONWEALTH OF MASSACHUSETTS  
DEPARTMENT OF ENVIRONMENTAL QUALITY

February 10, 1994

Mr. Kevin Woods (341-0073)  
Site Assessment Manager  
U.S. Environmental Protection Agency, Region III  
340 Chestnut Street  
Philadelphia, PA 19107

Re: Site Identification No. 300-0007

Dear Mr. Woods:

We have received information and laboratory results indicating that the wells of Eva Johnson and Ruth Johnson, at 340 Chestnut, are contaminated with perchloroethylene. Levels of PCE are said to be 40 to 80 times in excess of EPA's guidance for the Jameson well 10 times guidelines for the Johnson residence. Their homes are built on top of PCE that was used as fuel in an old furnace. Part of the soil appears to be the result of using the property as an unpermitted waste disposal area. The site was previously unoccupied. It would like to file a notice for this property and, given the contaminated drinking water, would request an expedited inspection process.

If you have any questions or would like further information, please call me at (341) 763-6303.

Sincerely,

Michael J. McGehee  
Assistant Director, Sectional Office
